RUTGERS UNIVERSITY  
Department of Chemical and Biochemical Engineering  

155:507 Analytical Methods in Chemical & Biochemical Engineering (3 credits)  
Fall 2016  

Professor: Dr. Shishir Chundawat  
Office Location: SOE C150A  
Office Phone: (848) 445-3678  
Email: shishir.chundawat@rutgers.edu  

Teaching Assistant: Chandra Kanth Bandi  
Office Location: SOE C001  
Office Phone: (848) 445-6926  
Email: cb814@scarletmail.rutgers.edu  

Class Timings: Wednesdays at 5:00-8:00 p.m.  
Class Location: BME Room 102, 599 Taylor Road  
Piscataway, NJ 08854  

Course Description:  
Matrices & Linear Algebra, First and higher order ODEs, Numerical solutions to ODEs, Systems of Differential Equations, Linear and nonlinear PDEs; Using Matlab (or other software packages) to solving chemical and biochemical engineering relevant problems.  

Course Objectives and Outcomes: In this course, students will develop the necessary mathematical tools to address advanced chemical engineering problems using a quantitative formulation. Analytical solutions to deterministic mathematical models encountered in chemical and biochemical engineering, including environmental and safety systems. Emphasis is on purpose, philosophy, classification, development, and analytical solutions of models occurring in transport phenomena, thermochemical, and reactor systems.  

ADVANCED MATHEMATICS TEXTBOOK (required for this course)  

ALTERNATIVE ADVANCED MATHEMATICS TEXTBOOK (not required for this course)  

ADDITIONAL CHEMICAL ENGINEERING SPECIFIC REFERENCES (not required for this course)  
Cutlip, M.B. and Shacham, M. Problem Solving in Chemical and Biochemical Engineering with POLYMATH, Excel, and MATLAB, Pearson, Second edition.  
PREREQUISITES

Undergraduate differential and integral calculus and differential equations or permission of the graduate director.

SOFTWARE

MATLAB: This is a numerical computing software package that can be used for solving problems relevant to this course. It is installed on all computers in the Microcomputer Laboratory (rooms C233, C241, B125, and D110). Please note that students can also access Matlab in the campus computing labs or via http://apps.rutgers.edu. Material to help with learning how to use Matlab is available from MathWorks (www.mathworks.com) and the internet. The following books can also be used (students are expected to self learn using this software or other related software packages for solving problems for homework or projects);

Students are welcome to use other software packages (e.g., POLYMATH, Excel, Mathematica) as well.

CLASS PARTICIPATION, HOMEWORK AND GRADING POLICY

Homework problems will be assigned, collected, and graded on a regular basis during the semester. All homeworks will be posted on the Sakai course webpage. Students are requested to turn in their homework assignments in-class (unless specifically instructed otherwise). No late homeworks will be accepted. There are going to be several unannounced quizzes held in class. There will be one midterm exam, one final exam, and multiple projects. Class participation and attendance are both important to do well in this course (additional instructions regarding class attendance and homework submission policy will be given in class). The course grade will be determined as follows:

Homeworks (4) 20%
First exam 25%
Second exam 25%
Projects (2) & Multiple Quizzes 30%

ACADEMIC INTEGRITY

Students are expected to familiarize themselves with and adhere to the University policy on academic integrity at: http://academicintegrity.rutgers.edu/policy-on-academic-integrity.

It is understood that a student’s name on any individual homework assignment, quiz, or exam indicates that he/she neither gave nor received unauthorized aid. On individual homework assignments, authorized aid includes discussing: 1) interpretation of the problem statement, 2) concepts involved in the problem, 3) approaches for solving the problem. Anything beyond this constitutes unauthorized aid and violates the academic integrity policy.

A student’s name on a group assignment indicates that he/she contributed to the assignment. Quizzes and exams are tests of individual performance. The student is not permitted to obtain assistance from any other person (or persons) during quizzes or exams. The student must adhere strictly to the instructions provided by the professor regarding what is permissible to be used during the exam. Use of lecture notes, computers, laptops, and cell phones without prior authorization of instructor is PROHIBITED during exams.
Students caught cheating on homework assignments, projects, or exams will be reported to the graduate program director for disciplinary action in accord with the university policy on academic integrity!

**COURSE MATERIAL COPYRIGHT**

All course material posted on the Sakai course website is copyrighted and may not be posted on any other web site at or outside of Rutgers without permission from the course instructor. Noncompliance with this policy will be treated as a violation of the Code of Student Conduct and will be referred to the Office of Student Conduct for action.

**COURSE TIMETABLE**

The course will follow the timeline indicated below. Reading from the required textbook will be assigned before each class. Several chapters of the required textbook might not be covered in class. Additional reading will be assigned from other sources and maybe posted on the Sakai course website. Some lecture slides will be available to the students as pdf files on the Sakai web site, however, students are expected to prepare their own notes. Additional material may be distributed as handouts in-class. A week-by-week schedule of the course, lecture topics, textbook reading assignments, and relevant lecture description is given below (*please follow announcements on the Sakai course webpage for any changes to the following schedule!*). **Students are advised to complete reading and practice problem assignments prior to attending the lecture to keep up!**
