

Admission for the academic year 2021-2022

Dear Prospective Student:

The Department of Chemical and Biochemical Engineering (CBE) at Rutgers University provides a comprehensive, modern chemical engineering graduate program, with exciting and innovative research efforts in core areas such as nanoscience and nanotechnology, transport phenomena, reaction engineering, thermodynamics and molecular simulations, separations, and process systems engineering. We also have extensive cross-disciplinary activities in bioengineering and biotechnology, and polymer science and materials engineering. In addition, the department is the first of its kind in the country to offer a full spectrum of graduate training and research in pharmaceutical engineering, an emerging area that will have expanding impact in the decades to come.

The program provides an intellectual climate for graduate students to conduct high impact cutting-edge research. It comprises 21 core chemical engineering and 21 interdisciplinary faculty members from various disciplines in engineering, physical and biological sciences. We are constantly looking to expand our teaching and scholarly capabilities to remain at the cutting edge of the evolving chemical engineering discipline. Our annual research expenditures exceed \$7 million dollars.

The graduate faculty in Chemical and Biochemical Engineering is particularly interested in attracting well-qualified candidates to its advanced degree programs. Admission is competitive based GPA in your undergraduate major, three letters of recommendation, and a personal statement. GRE general test scores are required for Ph.D. admission, and recommended for Master's admission. TOEFL or IELTS is required of all applicants whose undergraduate education was completed in a non-English speaking country. Scores must be current within 2 years of the applied semester. The minimum Paper based TOEFL score is 550. The minimum Computer based TOEFL score is 213. The minimum IBT-internet based TOEFL is as follows: Writing 22, Speaking 23, Reading 21, Listening 17. The acceptable IELTS score is bandwidth 7. The admissions decisions are made by a committee and are based on the applicant's entire admission packet, not just scores and grades.

Applications to the **PhD program received by January 15th** can be considered for fellowships and assistantships that include full stipend and full tuition remission. In addition, the program is a hub for an NIH sponsored doctoral training program in Biotechnology, and several research centers or institutes are centered in CBE including the Center for Structured Organic Particulate Systems and the Catalyst Manufacturing Center. Rutgers fosters diversity through several special fellowship and training programs and encourages underrepresented minority students to apply. All admitted full-time Ph.D. students receive funding through either teaching assistantship (TA), graduate assistantship (GA) or fellowship and can expect funding for at least five years subject to satisfactory progress. TA and GA positions are very limited and are reserved for Ph.D. students.

Application to the Master's program is done on a rolling basis until **the application deadline on August 15th**. A number of our Masters students seek out and find on their own grader or other positions in other departments such as Math and Physics that serve a large undergraduate population. We have a very limited number of grader positions in our department as well, depending on course enrollment. Many of our Masters students have been successful in obtaining summer internships in the relevant chemical or pharmaceutical industries, which can be accommodated in the form of CPT (curricular practical training) for international students.

Further information can be found and the application process initiated at <https://gradstudy.rutgers.edu/apply/overview>. If you have questions, please send e-mail to
